- Trained and tasked with creating and testing the WAP services for mobile operators in different countries under SYMBIOTIC SERVICES

PROJECT

Project Name: Vodacom STOS

- *Technologies*   : PHP,MYSQL,HTML,CSS,JAVASCRIPT,LINUX
- *Duration*   : Oct 2020 to till date
- *Role*   : Software Developer

- *Client* : STOS
- *Description* : Vodacom STOS is a telecommunication service. It provides a entertainment website for the users. It contains three modes of subscription i.e. WAP promotion, SMS, USSD. Auto renewal process also occurs once the user subscribed. Website is developed using the PHP, MySQL, HTML, and CSS.
- **Contribution:**
  - ➢ Created the end to end website pages and content.
  - ➢ Implemented the API Logic to communicate between the users and the operators.
  - ➢ Developed the content for entertainment and integrated the same in the website
  - ➢ Created sample test page for users to validate their content based on the subscription made.
  - ➢ Dealt with XML request for handling the notification received from the operator.
  - ➢ Performed end to end testing before implementing the logic in production.

Project Name: Tracking Tool

- *Technologies* : PHP,MYSQL,HTML,CSS,JAVASCRIPT,LINUX
- *Duration* : Jan 2022 to till date
- *Role* : Software Developer
- *Client* : Symbiotic
- *Description* : Overall project maintaining system. There will be tasks which can be uploaded, assigned to Project Managers. Each task will be having 20 stages including QC. PM will assign each stage to different users with target. All stages will be having multiple stages. QC required stages will get QC defects counts for each stage/task. Rating can be entered for each stage/task. All the entries, changes will be saved with date and time. Based on the data, various reports are generated such as Employee/PM target, completed, pending along with their performance, quality, quantity etc. Monthly target, completed tracking and few more reports.
- **Contribution:**
  - ➢ Created the above mentioned end to end scenarios single handedly and implemented the logic.
  - ➢ Created separate single login page with different Menu option based on the Roles using HTML, CSS, Bootstrap and JavaScript.
  - ➢ Created page for users to upload task status which will be inserted into Database using MySQL.
  - ➢ Created Separate Page for admin to view the task status of all stages.
  - ➢ Implemented mail functionality for user role to update the admin
  - ➢ Tested and modified the requirement based on the Client request.

Project Name: AV (Audio Video) Application

- *Technologies* : PHP, MYSQL, HTML, CSS, JAVASCRIPT, JQuery, FFMPEG LINUX Tool
- *Cloud* : AWS, Google, IBM, Azure
- *Duration* : Jul 2022 to till date
- *Role* : Senior Software Developer
- *Client* : Symbiotic
- *Description* : AV application reduces the manual work to create audio track & video track. It

provides wide variety of language options to create vast contents. AV application has three different use cases: Audio Track Creation, TOS Translation and Video Translating to Target Language.

- **Contribution:**
  - ➤ Implemented the end to end logic for all three use cases.
  - ➤ Created separate UI with different user options based on the logged in roles using HTML, CSS, Bootstrap and JavaScript.
  - ➤ Multiple clouds API's are integrated with our REST API.
  - ➤ Created separate user functionality for admin to complete entire storyboard from text to audio and audio video integration.
  - ➤ Implemented report module to download the completed SB's
  - ➤ Tested and modified the requirement based on the Client request.
